

Veridian

At Veridian, we're all about creating information advantage for those we serve. Built on more than 50 years of information technology and market leadership, Veridian is a knowledge applications company providing full service, integrated solutions to customers in national defense, critical infrastructure and essential business systems. We leverage more than 25 years of cyber security experience to ensure that our clients' data and network systems are secure. We draw upon our world-class discover tools to help customers turn bits into knowledge for intelligent decision-making. And, we couple our extensive domain expertise with the power of information technology to deliver integrated solutions that are creative and customer critical...whether developed for the board room or the battlefield.

►►transportation

Veridian pioneers automotive safety and Mobile Data Applications through its unique capabilities in accident investigation and causal analysis, vehicle crashworthiness, restraint systems, and tire research. Veridian's intelligent information technology and systems integration expertise, combined with its more than 50-year experience in automotive safety, provide an effective platform for the company's development of intelligent transportation systems (ITS) to reduce fatalities on U.S. roads and to create more efficient vehicle travel. In particular, the ITS commercial group includes in-vehicle as well as back-office capabilities for integrating complete Mobile Data Applications such as Automatic Vehicle Location Systems and Mobile Data Terminals.

Advanced multi-sensor telematics applications now being developed by Veridian will become standard equipment in the vehicles of tomorrow. These solutions will sense and communicate vehicular crash and injury information without passenger intervention. Integrated incident management and mayday response centers will receive this data and automatically dispatch the most appropriate response. Veridian's leadership position in deploying these integrated solutions will save lives and dramatically reduce the cost of injury in the U.S. and, eventually, worldwide.

Veridian provides its customers with the highest quality test facilities, equipment and analytical services to responsively meet the needs of the surface transportation market place. We are able to address our customer's problems at every stage of need - from concept through operational system.

Our offerings include:

- Advanced Vehicle Integration for Control & Driver Assistance
- Collision Avoidance
- Commercial Vehicle Safety/On-Board Monitoring & Clearance

Systems

- Crash Research & Analysis
- Incident Management & Emergency Response
- Mayday/Automated Collision Notification/Event Data Recorder
- Test Equipment Fabrication
- Test Facilities Management
- Wireless Applications for Public Safety & Fleet Management
